

## **RECSTATION AUTONOMOUS SPEECH RECORDING AND REPEATER STATION**

Due to **the value of speech information as the majority** of our daily information flow, those who manage and use it according to an **integrated (system) concept and practice** are also able to operate public administration, the private sector and the daily life of individuals in a more competitive, economical and secure way.

The above are provided by RECSTATION with respect to telecommunication:

A solution for speech recording on mobile phones and other telecommunication channels using a versatile, autonomous, protected repeater and linking station for the purpose of recording, managing and processing the conversations of public administration institutions, companies, small and medium size businesses and individuals.

The purpose of the speech recording station is to ensure that all speech connections to be recorded should take place through this linking station and protect the geographical location of the caller.

The telecommunication terminals of the two participants of the conversation and the linking station itself can be placed at any three geographical locations in the world.
